

New ibcs Facilities Management module provides serviced office industry with the most comprehensive management software to date.

ra Information Systems today announced the release of a new Facilities Management module for their management solution, **ibcs**.

ibcs customers already benefit from having the most encompassing software solutions available to the Science Park, Business Centre, Incubation and Innovation Centre industries, but **ra** are now adding additional features, helping clients and potential customers to manage their building space even more effectively.

“A growing awareness of the importance of building and facilities management is leading to a rising demand for management software offering superior and wide reaching functionality” said Noel Kennedy, **ra**’s Business Development Manager. “Before your choice was to either purchase an FM system and sacrifice the client management side of the software or do the opposite and sacrifice the FM side of things. In some cases you had the added cost of buying and maintaining two separate systems.

With our FM module however, you can now have a centralised system perfect for all of your building management needs and also one that has been developed and tested with leading serviced office environments.”

With the new easy-to-use **ibcs** Facilities Management module, users will have access to the tools, techniques and technologies that will enable them to optimise maintenance resources, improve equipment productivity, facilitate faster and make more insightful business decisions.

The **ibcs** Facilities Management module also offers customers improved efficiency, with full asset management and maintenance, a detailed picture of every critical asset, its last known location and monitored performance at all times, leaving the user in total control.

This new industry focused Facilities Management tool is available immediately and integrates perfectly with the existing **ibcs** software suite. Designed to make the day-to-day business activities of managing any Business Centre, Science Park, Incubation or Innovation Centre easier, **ibcs** allows managers to focus their time on providing a first class service to their clients.

Further information about **ibcs** and the details of the Facilities Management Module can be found at http://www.ibcs-software.com/Facilities_Management. Alternatively please contact **ra** Information Systems on 0845 365 10 71.
