

Introducing UKSPA CLARITY – Powered by ibcs. A Clear Vision from UKSPA.

UK Science Park Association (UKSPA) Chief Executive Paul Wright is pleased to announce the launch of UKSPA CLARITY – The exciting software product, developed with IT partners' **ra** Information Systems.

UKSPA's extensive knowledge, gained over the past three decades through the provision of support and guidance to innovation environments, has helped to deliver efficient, trusted and profitable business locations for pioneering and high tech companies. Combining this knowledge with **ra** Information Systems' established and highly successful Science Park management system **ibcs**, UKSPA CLARITY will deliver to the Membership a powerful solution for the efficient management of leases and licences, conferencing, enquiries, surveys, reporting, billing, facilities and much more.

ibcs was launched in 1999, and has a successful track-record of managing serviced offices. Since 2005 the focus of the system has moved to Science Parks, Technology Parks and Innovation-Led Incubators, and it is now deployed in over 45 sites within these sectors across the UK. The experience and feedback from current **ibcs** users provides a clear indication that UKSPA CLARITY will be a powerful tool to simplify management functions, improve efficiency and streamline communications, whilst continuing to evolve to meet the changing needs of the Membership.

Speaking at the recent UKSPA CLARITY launch, Product Manager James Chaffer said, "I have been working closely with UKSPA members for over 5 years now, providing software solutions to improve their operational efficiency. To see this hard work result in the launch of UKSPA CLARITY is very exciting for me personally, for the Association and, most importantly, for the members."

Based on the original foundations of **ibcs**, UKSPA CLARITY will provide a modular solution for all size of operation, enabling flexibility and customisation as individual requirements develop.

UKSPA CEO Paul Wright commented, "UKSPA members will also benefit from the inclusion of additional modules focusing specifically on key areas for the industry, showing further our commitment to improving the efficient management of Science Parks, Technology Parks and Innovation-Led Incubators."

The Association will be working hard over the coming months to ensure that the delivery of UKSPA CLARITY, alongside new initiatives such as UKSPA Aspire Quality Assurance Programme, will provide members with the tools required to continue delivering first class innovation locations, providing the best possible environment for the high tech companies that are contributing to future economic growth.

Further details will be coming soon to the website www.ukspa-clarity.com but for information now, please email paul.wright@ukspa-clarity.com or call the UKSPA CLARITY team on +44 (0)1246 459 446.
